

WHAT IS GMS?

The **One Grant Management System (OneGMS)** is a web-based platform that supports the management of the entire grant life cycle for all Country-Based Pooled Funds (CBPFs) and Central Emergency Relief Funds (CERF). It is a mandatory tool for CBPFs and a fundamental management instrument for OCHA's fund managers. The OneGMS promotes efficiency, effectiveness and supports risk management. It harmonises business processes while catering to the special needs of each fund. The system strengthens OCHA's data analysis and information management capacity.

The OneGMS streamlines allocations and facilitates interaction among all stakeholders involved in the grant management process, supporting them in discharging their functions. It allows grant recipients to submit project proposals online. Financial and narrative reporting can therefore be done in real time, together with any project revisions. The system provides for real time tracking of processes, tasks, reminders and feedback.

GRANT MANAGEMENT LIFE CYCLE

WHICH SERVICES DOES THE GMS PROVIDE?

Before the introduction of the GMS, the Grant Management process was cumbersome and subject to human errors, considering that CBPF projects were managed offline. GMS solved these issues by providing:

TRANSPARENCY AND ACCOUNTABILITY

Modernization of tracking and monitoring of grants and projects, embedment of a fraud-dedicated module and visibility on the whole allocation process.

UNIFORMITY AND FLEXIBILITY

A harmonized system common to all CBPFs, while allowing flexibility relevant to adapt it to each of the specific contexts.

INCLUSIVENESS

Visible task lists, easy access and participatory decision making processes through scorecards and assessments.

INFORMATION MANAGEMENT

CERF and CBPF data and trends analyses made available by on-target visualizations, included in the GMS affiliated information management platforms: the **CERF** and the **CBPF Data Hubs**.
